Summary of research/findings

- Task was to investigate the data privacy and security issues of urban big data and smart cities
- A number of concerns were identified:
 - Surveillance and privacy harms
 - Ownership, control, data markets
 - Social sorting / redlining
 - Predictive profiling / anticipatory governance
 - Nudge / behavioural change
 - Dynamic pricing
 - Data security
 - Control creep
 - Buggy, brittle, hackable urban systems

Hacking the city

- Weak security and encryption
- Insecure legacy systems and poor maintenance
- Large and complex attack surfaces and interdependencies
- Cascade effects
- Human error and disgruntled (ex)employees

Key lessons

- Market:
 - Industry standards and self-regulation
 - Privacy/security as competitive advantage
- Technological
 - End-to-end strong encryption, access controls, security controls, audit trails, backups, up-to-date patching, etc.
 - Privacy enhancement tools
- Policy and regulation
 - Education and training
 - FIPPs
 - Privacy by design;
 - security by design
- Governance
 - *Vision and strategy*: (1) smart city advisory board and smart city strategy;
 - *Oversight of delivery and compliance*: (2) smart city governance, risk and compliance board;
 - *Day-to-day delivery*: (3) core privacy/security team, smart city privacy/security assessments, and (4) computer emergency response team
